                                                                                                                                                                             vasculodenesis and angiogenesis. Angiogenesis inhibition or increased vascularisation may be clinically desirable (e.g. to suppress solid tumour growth or in wound healing, respectively). The IIK-lip can be administered to treat conditions with defective or insufficient tik-l Polypepides may also act as carriers to deliver diamostic/thorapautic apparts to ceils to which fill-by binds, to generate antibabilities, and to identify fir-lip antiposists
                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding a human foetal liver kinase I binding protein - used to treat conditions with insufficient protein, deriver agents to cells and identity antagonists to treat protein-mediated conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bestal liver Kinase I binding protein; human; IIk-lbp; coceptor tyrosine Kinase; gasmitebaseks; angiogenesis
                                                                                                                                                                                                                                                                                                     The mature fikl-bp can be secreted from host cells transformed with an expression vector including an isolated fik-libp cDNA clone (see AA168811). Fik-libp can be used to isolate cells to which it binds,
                                                                                                                                                                                                                                                                                                                                        This polypoptide comprises a human factal liver kinase I binding protein (IIk-lbp) (see AAWITR37) that binds to the receptor tyrosine kinase (I'k-l expressed on vascular egecthelial and other cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             histochemical tissue) and also to modulate the growth of mammalian endathedial cells (e.g. to accelerate andropenesis and to promote endothedial tunction of lymphatic vessels). Inhibitors of VMBF C, such as antibodies, can be used to control endothedial cell proliteration, e.g. lymphangioma or metastatic cancer.

Monuse and quail VEGF C sequences (see AAW00944-45) have also been

                                                                                                                                                                                                                                                                                                                                                                           The vascular endothelial growth factor C (VEGF-C) polypeptides have activities affecting growth and migration of vascular endothelial cells, promoting growth of lymphatic endothelial cells and lymphatic vessels, increasing vascular permeability, and affecting myelopoiesis. The products can be used for stimulating anglogeneses, for inhibiting anglogenesis, to stimulating lymphanglogenesis, treatment or prevention of inflammation, oedema, elephantiasis, or Milroy's disease. They can
                                                                                                                                                                                                                                                                                also be used to modulate myelopolesis, e.g. treating granulocytopenia. They can also be used for modulating the growth of endothelial cells. They can also be used to stimulate lymphocyte production and maturation and to promote or inhibit trafficking of leucocytes between tissues and lymphatic cessels of to affect adaption in and out of the thymus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Flt4: vascular endothelial growth factor C: vascular endothelial cell; lymphatic endothelial cell: myelopoiosis; andiogenoses; inflammation; lymphangiogenesis; ocdema; elephantiasis; Milroy's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           truncated proteins recombinantly. The truncated VRP subunits, optionally expressed from gone therapy overers. Page in vice and in vitre adjaganic activity and are used to gimulate antiopenesis, particularly coronary collateral vessel development in cases of cardiac ischaemia, to stimulate endothedial cell growth and migration in vitre; to treat heart disease; to treat ischaemia (e.g. cardiac, chronic coronary or chronic lower limb ischaemia, stroke and peripheral vascular disease); to promote healing of wounds (of skin or intestines), and to increase vascular permeability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This represents the amino acid sequence of human vascular endothelial growth factor (VEGF)-C protein. The invention provides tripograped VEP (VEGF-related protein) subunits that have at least one amino acid N-terminal to the first Cys of the core sequence deleted. Host cells transformed or transfected with expression vectors containing nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            recombinant; truncated; gene therapy, andiogenesis; cardiac ischaemia; corolary; collateral vessel development; cell growth; migration; heart; lower limb isobsectar stacks, peripheral massilar disease, intestine,

This invention describes a corel vascular endothetial growth factor X (VEGF-X) protein (Ia) and its encoding polynuchedide (IIa) which has vulcerary, cytostatic, antirheumatic, antiarthritic, antipsoriate an antidiabetic activity and acts as an angiogenesis and vascularization

antipsoriatic and

The products of the invention are useful for prepairing medicaments for freating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue requestion and organ repair by promoting angiogenic activity or vascularization. This sequence represents the buman VECC protein used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 regulator. An antisense molecule of the invention is useful for treating or proventing career, the unatoid arthritis, psoriasis and diabetic not inepathy by inhibiting and openic activity of imappropriate vascularization including formation and proliferation of new blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Militay Norme syndrome: Tymphoedema praecox; VEGE C; vascular endothelial growth factor C.

and sarrowns. F114 receptor tyrosine kinase binding compounds can be used for manutarturing medicament useful for diagnostic screening, imaging and treatment of malignancies characterised by F114 expressing blood cells. The F114 quene maps to chramcsomal ragion 545 and is expressed as 5.8 kb and 4.5 kb mkNAs which differ in their 3' sequences and are differentially expressed in HEL and DAMI cell lines. F114 because to a subfamily of class III receptor tyrosine kinases (RTKs). It is used as a target for tumour imaging and anti-tumour therapy. The present sequence is a human prepro vascular endothelial growth factor C (VEGF-C), a specific example of F114 binding compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; receptor tyrosine kinase; RTK; Flt4; fms-like tyrosine kinase 4; VEGFR-1; vascular endothelial growth factor receptor-3; chromosome 5q35; cytostatio tumeri imaging; anti-tumeri thorap; treatment; diagnosis; neoplastic disease; lymphoma; carcinoma; breast; squamous cell; melanoma; sarcama; malianancy; VEGF-C; vascular endothelial growth factor C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ligand to FIt4 thereby inhibiting Flt4 mediated proliferation of vascular endothelial cells. The compound is useful for treating meroplastic disease such as breast carcinomas, squamous cell carcinomas, lymphomas, melanomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The patent discloses a method to treat reoplastic disease characterised by expression of the tiposine library 1 (Fil4) toccutar (also referred as vascular endothelial growth factor receptor-3, VECEP-3) in endothelial cells of blood vessels adjacent to malignant meoplasm. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating neoplastic diseases such as lymphoma, carcinomas, melanomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (UYHE-) UNIV HELSINKI LICENSING LTD OY

    A human vascular endothelial growth factor (VEGF)-related protein (VRP) (AAWI (833) has been identified that binds to, and stimulates the phosphorylation of, the receptor tyrosine kinase F1(4. It is
postulated to be a third member of the VEGF protein family. Its amino acid sequence was deduced from a cDNA clone (AAT59/29) obtd
                                                                                          Claim 6; Fig 1A-D; 68pp; English.
